## Computer Science Student

B.Tech Computer Science (Cybersecurity) student at Jaipur National University with hands-on experience building Python automation, backend workflows, AI-assisted tools, and security-focused software. Seeking software engineering, backend, systems, or cybersecurity internship opportunities.

## Technical Skills

| | |
|---|---|
| **Programming Languages** | Python, C (Basic), C++ |
| **Core CS & Development** | Data Structures & Algorithms, Object-Oriented Programming, REST APIs, Backend Development |
| **Backend Development** | FastAPI, JSON, SMTP/IMAP |
| **Cloud & Developer Tools** | AWS, Docker, Git, GitHub, Linux, VS Code, Command Line |
| **Cybersecurity** | Web Application Security Testing, Network Analysis, OSINT, Threat Intelligence, Vulnerability Assessment |
| **Databases** | PostgreSQL, SQLite |

## Experience

**Rajasthan Police - Cyber Crime Branch** Apr. 2024 – Present
*Cyber Security Research Intern* *Jaipur, India*

- Built Python-based investigation and analysis tools for cybercrime workflows using structured datasets and local AI models.
- Worked on data processing, Telegram OSINT, and criminal network analysis pipelines for research prototypes.
- Presented prototypes to Cyber Crime teams and received a Letter of Recommendation from Rajasthan Police HQ.

**ShadowFox - Cybersecurity Training & Services** Jul. 2025 – Aug. 2025
*Cyber Security Intern* *Remote*

- Performed guided web application and REST API testing using Burp Suite, Nessus, and Nmap.
- Documented findings, performed OSINT reconnaissance, and analyzed network traffic with Wireshark.

## Education

**Jaipur National University** Jaipur, India
*B.Tech in Computer Science (Cybersecurity), CGPA: 7.8* *2023 – 2027*

## Projects

**TELEMON - Telegram Intelligence Pipeline** *Python, OSINT, NLP, Qwen 70B* 2026

- Built a Python pipeline for public-source Telegram channel discovery, crawling, message extraction, sentiment analysis, and role/entity classification.
- Ran an authorized one-week research collection across approximately 700 scam-related channels, indexing approximately 11,000 APK artifacts and 15,000 associated user accounts for analysis.

**ADVANCED THREAT EMULATION FRAMEWORK** *Python, C, Android, AI-Assisted Code Review* 2025 – Present

- Combined NEBULA, Blackout Windows, Blackout Android, and GhostLock PoC components into a multi-platform security research framework for studying system behavior and detection coverage.
- Used Claude and Gemini-assisted code review to identify bugs, improve research workflows, and refine the framework's web-based dashboard design.

**PHANTOM-EVASION - Security Testing Research** *Python, Security Testing, OSINT* 2024 – 2025

- Built controlled experiments to evaluate detection coverage and document security findings across different execution and analysis scenarios.
- Created reusable research notes and data-processing workflows to support investigation, comparison, and defensive mitigation planning.

## Certifications & Achievements

- OPSWAT Academy: Cybersecurity Fundamentals Associate (2026) and Introduction to CIP (2026); Cisco Networking Academy: Introduction to Cybersecurity (2025).
- Letter of Recommendation from Rajasthan Police HQ; 6th rank in university-wide Capture the Flag competition.
