Computer Science Student

Computer Science (Cybersecurity) student with experience developing Python automation, backend workflows, AI-assisted analysis tools, and security research software. Seeking software engineering, backend, systems, or cybersecurity internships.

Technical Skills

Programming Languages: Python, C (Basic), C++
Core CS & Development: Data Structures & Algorithms, Object-Oriented Programming, REST APIs, Backend Development
Backend Development: FastAPI, JSON, SMTP/IMAP
Cloud & Developer Tools: AWS, Docker, Git, GitHub, Linux, VS Code, Command Line
Cybersecurity: Web Application Security Testing, Network Analysis, OSINT, Threat Intelligence, Vulnerability Assessment
Databases: PostgreSQL, SQLite

Experience

Rajasthan Police - Cyber Crime Branch Apr. 2024 – Present
Cyber Security Research Intern *Jaipur, India*

- Developed Python-based investigation and analysis tools to process structured cybercrime datasets and support investigative research workflows.
- Built data-processing, public-source Telegram OSINT, and criminal-network analysis pipelines for research prototypes.
- Presented research prototypes to Cyber Crime teams and received a Letter of Recommendation from Rajasthan Police HQ.

ShadowFox - Cybersecurity Training & Services Jul. 2025 – Aug. 2025
Cyber Security Intern *Remote*

- Conducted web application and REST API security assessments using Burp Suite, Nessus, and Nmap.
- Documented security findings and remediation recommendations, performed OSINT reconnaissance, and analyzed network traffic with Wireshark.

Education

Jaipur National University Jaipur, India
B.Tech in Computer Science (Cybersecurity), CGPA: 7.8 *2023 – 2027*

Projects

TELEMON - Telegram Intelligence Pipeline *Python, OSINT, NLP, Qwen 70B* 2026

- Developed a Python intelligence pipeline for public-source Telegram channel discovery, message crawling, structured extraction, sentiment analysis, and entity/participant-role classification.
- Built an end-to-end workflow that collects channel metadata and messages, organizes APK artifacts, and prepares structured records for investigation and threat-intelligence review.
- Used a locally hosted Qwen 70B model to support semantic analysis, sentiment classification, and identification of developer and seller activity patterns.
- Conducted an authorized one-week analysis of approximately 700 scam-related channels, indexing approximately 11,000 APK artifacts and 15,000 associated accounts for threat-intelligence triage.

ADVANCED THREAT EMULATION FRAMEWORK *Python, C, Android, AI-Assisted Code Review* 2025 – Present

- Integrated NEBULA, Blackout Windows, Blackout Android, and GhostLock PoC components into a multi-platform threat-emulation framework for evaluating system behavior and endpoint detection coverage across Windows and Android.
- Designed reusable research components and documentation workflows to compare test observations, record detection results, and support defensive security analysis.
- Developed dashboard workflows to organize research evidence, test outputs, component status, and findings in one place for review.
- Applied Claude- and Gemini-assisted code review to identify software defects, improve testing workflows, and refine the web-based research dashboard.

PHANTOM-EVASION - Security Testing Research *Python, Security Testing, OSINT* 2024 – 2025

- Designed controlled security-testing experiments to evaluate detection coverage across different execution and analysis scenarios.
- Created reusable Python data-processing and research-documentation workflows to compare findings and support defensive mitigation planning.
- Produced structured test notes and security findings to support repeatable analysis and defensive improvement discussions.

Certifications & Achievements

- OPSWAT Academy: Cybersecurity Fundamentals Associate and Introduction to CIP (2026); Cisco Networking Academy: Introduction to Cybersecurity (2025); Rajasthan Police HQ Letter of Recommendation; 6th-place university CTF rank.
